60	15	45

This Developmental Age Chart is used during Evaluations for the determination of Eligibility as well as the child's Present Levels of Performance. In the CNMI, a child qualifies for Early Intervention services if he/she displays at least a **25%** delay in one or more of the developmental areas or is born with an Established Condition.

Adjusted Age can be used until the child is 24 months old. At 24 months old, do not adjust.

From the American Academy of Pediatrics.

#### Formula to Calculate Adjusted Age

Chronological age: 20 weeks  
Number of weeks baby was premature: 6 weeks

Subtract the number of weeks premature from the chronological age:  
20 weeks minus 6 weeks equal 14 weeks.

14 weeks is baby's adjusted age.

Divide baby's adjusted age in weeks by 4 to determine baby's adjusted age in months: 14 divided by 4 equals 3 1/2 months.
